

Trasta Airfield Lighting Transformer Stand

Applications

This patented non-metallic transformer stand is designed to support an isolation transformer in an L-867 or L-868 base can.

Features

- Elevates the isolation transformer approximately 6" or 12" above the base can bottom.
- Non-conductive construction provides a degree of isolation from the metallic base can.
- The fluted foot bottom allows for passage of the series conductors while leaving the drain hole unobstructed.
- Field tested to support in excess of 200 pounds.
- Ships flat for economical delivery and assembles in seconds.
